

Uninstalling Image Optimization Magento extension manually

To disable the module manually you need to edit the module config file `/etc/Tiny_CompressImages.xml` and set its `active` parameter to `false`, like:

```
<?xml version="1.0"?>
<config>
<modules>
<Tiny_CompressImages>
<active>false</active>
<codePool>community</codePool>
</Tiny_CompressImages>
</modules>
</config>
```

Do a complete cache flush and Magento will now use the default image caching system again.
